

TURKNODE

TürkNode represents a revolution in passive income. We bring a new perspective to the economic volatility in Turkey and around the world with the "Fixed Passive Income" model. By purchasing nodes hosted in the TurkNode data center, you earn passive income from the revenue generated from our node infrastructure.

Used to support transactions on 7 different blockchains, the Turknodes infrastructure earns from every transaction flowing through these networks. By purchasing a Turknode, you profit from this transaction and up to 80% of the USD value of the initial investment and benefit from our proprietary node infrastructure strategy.

Turknodes build the underlying infrastructure on which blockchains like Bitcoin and Ethereum are built, as well as other different components. These blockchains require nodes or servers connected to all other nodes in a network that store data from all transactions flowing between them. Turknode builds infrastructure for a wide variety of blockchains and empowers these networks by increasing the decentralization and security of these blockchains. Turknodes are geographically distributed around the world to support the decentralization of the networks it aims to secure and further expand its global footprint.

By removing barriers to entry, Turknodes enables ANYONE to join the fixed passive income revolution by purchasing one or more nodes directly from our website. The expected rate of return on a Turknode is 80% net profit after 1 year. With each node purchased, Turknode is able to expand the safety and security of the blockchains that our nodes support, while providing passive income to node creators.

As inflation ravages global markets, making food, housing and healthcare unaffordable, Turknode's USD-linked rate of return protects investors from the risk of high inflation and provides a stable income that is not risky.

Set up 1 node for 100usd with Turknode Fixed Passive Income assurance and earn \$15 USD every month or \$180 USD per year. Your node expires after 12 months and if you wish to continue after 12 months you deposit another \$100 USD and earn \$20 USD per month- \$240 USD annually. The 100 USD you deposit will be valued at 180 USD at the end of 12 months. Your node can continue to earn by depositing another 100 USD to earn a boosted rate of \$20 USD per month or \$240 per year. Thus, with the Turknode guarantee, you will both provide a fixed monthly income and earn more than the money you invested at the end of the year.
